

About Lemhi

Lemhi is the managed AI services platform for MSPs. Its mission is to ensure no business is left behind in the AI revolution simply because it's too small. Lemhi works alongside MSPs to turn AI into a repeatable practice, so every small and midsize business can operate with AI built into how it works, delivered through its MSP. 3 of Lemhi's founders came up through the same MSP, then built and sold MSP software together. The team brings 45+ years in the channel. Backed by Top Down Ventures, Lookout Ventures and Start Something Ventures, Lemhi is based in Indianapolis, Indiana.
